

Customised developments for your construction site management

Customised, targeted development of applications and interfaces for your construction site management

Product description

The process of standard software does not match your requirements? The project requirements are very individual? Some requirements call for customised solutions. Our expertise in construction site management and solution development enables us to create customised solutions for your project. We rely on established low-code systems as well as hard coding for the ideal result. Our developments are characterised by a deep understanding of construction site reality and a clear focus on your success.

Our services

- Definition of requirements together with the project team in a specification sheet
- Development of applications tailored precisely to requirements (e.g.: shift reports, construction progress tracking, reporting, construction site logistics and storage location management, etc.)
- Creation of interfaces and automations between systems used (e.g. automatic plan and file transfers and revisions; data extraction and compilation for reports, etc.)

Your advantages

- Get customised functions that are not available in standard solutions and therefore improve your project success
- Benefit from functionalities that support your way of working and your own process
- Cost savings through optimised processes and improved efficiency
- Effective data integration instead of manual transfers
