

Information and project management system

Professional digital project management

Product description

In a structured process, the project requirements are determined together with the project team and prioritised according to their importance for the success of the project. We then work closely with you to select the most suitable solution. We draw on a wide range of proven, established software providers and develop customised solutions where necessary to meet your specific requirements and ensure the ideal result for your project.

Our services

- Needs analysis and evaluation of the most suitable project management system that best supports the project objectives
- Providing, setting up and configuring the information and project management system according to the previously defined information and project management processes
- Simplification and digitalisation of construction site management workflows
- Training for effective use of the solution(s)
- Support for users of the technical solution(s)

Your advantages

- Efficient construction site management to complete construction projects to a high standard, on time and within budget
- Greater transparency, cost savings and better quality thanks to accurate real-time information
- Fulfilment of ISO 19650 requirements
- Targeted information guidance, easy retrieval of relevant information
- Construction site-proven mobile applications
